PRESTIGE SQUARE GUARD GUTTER FITTINGS

ELBOW/CORNER

Corner fitting is used for connecting one gutter to another to turn the direction of the gutter in a 90 degree angle.

ELBOW/CORNER DROP

Corner drop fitting is used for connecting one gutter to another with a water outlet on the edge. Outlet width is 90 mm.

CLAMP

A square rain gutter clamp is the most important component for the fitting of gutter. There are three kinds of clamps; uPVC clamp, GI clamp and uPVC clamp with GI extension.

Where quality drains meet...!!

CENTER DROP

Center drop fitting is used to connect one gutter to another with an outlet for water. It locks the gutter inside the clip which prevents edges from flipping out. Outlet width is 90 mm.

CENTER JOINT

Center joint fitting is used to connect one gutter to another. Also called as 'Coupling'. It locks the gutter inside the clip which prevents the edges from flipping out.

END DROP

End drop fitting is used for outlet of water with a stopper. Outlet width is 90 mm.

END CAP

End cap fitting is used to close a side of the gutter.
